# Saitek PC Gamers Keyboard

Home Review Video Specs User opinions Essentials Compare Where to buy

## CNET editor's take

A blue backlight is always cool, but we like this keyboard more for its dedicated gaming buttons.

## At a glance

Editors' rating: 7.2 Good

User rating: 0% thumbs up 100% thumbs down from 2 users

The good: Cool-looking blue LED backlight; 27 extra programmable buttons.

The bad: Keyboard is extremely long; separate keypad takes up even more desk space.

What's it for: Playing PC games that require complex keyboard commands.

Who's it for: PC gamers who want to better organize their control setups.

Essential extras: High-end gaming mouse.

The bottom line: The keyboard's blue backlight will gussy up any gamer's setup, but this unit requires plenty of room on your desk.

### User opinions for Saitek PC Gamers Keyboard

- "It broke my games"**  
 Big Al on 16-Nov-2004 11:25:55 AM  
**Pros:** Keyboard is nice as a standard keyboard goes. The blue backlight is why I bought it.  
**Cons:** The drivers for for programming the keyboard and keypad are buggy. The Saitek Web site has no downloadable drivers for it.
- "It broke my browser (Firebird)"**  
 badblackcat on 18-Nov-2004 07:55:55 PM  
**Pros:** Nice looking, well made, blue backlighting is cool. Keys respond well.  
**Cons:** The software seems to be very buggy. No online software downloads for the keyboard. The manual is is for the joystick not the keyboard. Firebird didn't work well afterwards.
